

Cover Letter

Dear Hiring Manager,

I'm excited to apply for the Designer, Studio position at Domaine. As a UX/UI designer and web developer, I love creating seamless, user-friendly experiences that connect design with functionality. With hands-on experience in Figma, web design, and eCommerce, I thrive in fast-paced, collaborative environments.

I recently designed and developed the Google Developers Group Windsor website (<https://wedevfest.com>), making event details easier to access and ticket booking more intuitive. I also worked on various UX/UI projects, including branding and interaction design for startups and eCommerce platforms. These projects taught me how to balance aesthetic appeal with usability, working closely with developers and stakeholders to ensure a smooth design-to-development process.

What I Bring:

- ✓ Web & eCommerce Design – Experience creating responsive designs for digital platforms and online businesses.
- ✓ Proficiency in Figma & Adobe Creative Suite – Strong knowledge of design systems, prototyping, and UI components.
- ✓ Client Collaboration & Communication – Comfortable presenting design concepts, incorporating feedback, and ensuring brand consistency.
- ✓ Problem-Solving & Attention to Detail – Focused on delivering pixel-perfect designs while meeting business objectives.
- ✓ Team-Oriented & Proactive – Used to working in cross-functional teams, managing tasks efficiently, and supporting creative projects from concept to launch.

I'd love the opportunity to bring my design expertise, problem-solving skills, and passion for digital experiences to your team. Looking forward to discussing how I can contribute to Domaine's creative vision. Let's chat!

Best,

Daria Deriagina
